Build Your Product

PROBLEM STATEMENT

Acumatica supports only two types of products: Stock and Non-Stock Items. As a result, managing the product catalogue would be extremely challenging when working with customized products because users would have to identify every conceivable combination as a separate SKU.

Additionally, customers have an easy way to identify the SKU and its associated options.

SOLUTION OVERVIEW

BYP products in Acumatica offer businesses a highly customizable and versatile solution. Through which businesses can create rules and options, and tailor their product offerings to meet the specific needs of their customers. This level of customization extends to price management as well, with flexible combination-driven pricing options.

BYP empowers businesses to define their products exactly as they need them to be regardless of it's through pre-defined options or custom configurations. Additionally, businesses can establish rules to govern which combinations are allowed or disallowed, giving them even greater control over their product offerings.

In brief, BYP products in Acumatica provide businesses with the flexibility and control they need to create highly customized product offerings that meet the specific needs of their customers.

HOW IT WORKS

1. Create a BYP SKU by providing the required specifications: SKU, Description, Options, Rules, Pricing, etc. (You can also import multiple BYP SKUs using Acumatica's standard import scenarios).

2. Create a sales order in Acumatica.

3. Add BYP SKU to the sales order. This will bring up the screen to configure the options for building the unique item.

4. Proceed with the usual process of creating shipments, print pick tickets, invoices, etc.

KEY BENEFITS

1. Use a single SKU to define the product specifications and allow the options to be chosen at the time of placing an order.

2. Order processing follows standard Acumatica allocation rules ensuring that inventory is not overallocated.

3. Leverages Acumatica's serialization capabilities to generate a unique serialized number to track and manage the item including returns/refunds.
