fusion CommercePro

PROBLEM STATEMENT

While Acumatica is a very capable and powerful ERP solution that offers significant functionality for Commerce and Retail customers, there are several features that the market needs, which are not currently available out-of-the-box via Acumatica.

These features cover a variety of areas including Customer Service, Order Management, Inventory Management, Pricing and Fulfillment. While each of these can be customized via Acumatica's powerful Cloud xRP platform, not every customer can afford the cost and efforts needed to build this functionality.

SOLUTION OVERVIEW

Kensium's CommercePro is a collection of tools that enhance Acumatica's capabilities for commerce / retail customers in areas such as Customer Service, Order Management, Inventory Management, Pricing and Fulfillment. Key functionality includes:

- Email address / Sales Order uniqueness across channels.
- Customer order summary providing lifetime value.
- Tracking inventory at vendor.
- Managing free stock items.
- Tag custom services for sales order line items.
- Shipping Restrictions.
- Ensure collection of payment before shipping.
- Auto-assignment of sales categories to stock and non-stock items.
- Improved allocation of kit inventory via Quick Kits.
- Calculate and display kit quantity as well as price.
- And several more...

HOW IT WORKS

1. Install Commerce Pro extension for Acumatica.
2. Set up the necessary features by navigating to the appropriate configuration section for each feature.
3. Improve efficiency across a variety of areas in your commerce / retail operation.

KEY BENEFITS

1. Enhance Acumatica's core capabilities for commerce/retail customers.
2. Reduce implementation time by leveraging Commerce Pro than customizing Acumatica.
3. Significant flexibility in customizing system behavior via standard Commerce Pro Configurations.
4. Simplify updates/upgrades via Kensium's "Always Current" support for Commerce Pro.
5. Take advantage of new features/capabilities that are added to the module quite regularly.
6. Built-in support for commerce integrations such as Adobe / Magento connector, Sellercloud connector, etc.
