fusion WMS

PROBLEM STATEMENT

The need for shipping greater volumes of products faster and changing distribution requirements that serve ever more demanding customers imposes huge strain on today's warehouses. Failure in any one activity can lead to performance costs, increased operating costs, or worse - loss of critical clients. To meet unique needs of each business model, such as internet retailer or large box distributor, businesses need an effective Warehouse Management System to keep Acumatica up to date with real-time data.

SOLUTION OVERVIEW

FusionWMS is the only imbedded Warehouse Management System for Acumatica. The only software that exists outside of Acumatica is that on the handheld. There is no maintenance of additional software or sync or external data.

FusionWMS is highly configurable to meet the requirements of internet retailers, manufacturers, and distributors to big box retailers. Installation and supported by integrated Acumatica Resellers reduces the number of parties engaged. FusionWMS has highly trained specialists with deep experience to advise and assist when called upon.

HOW IT WORKS

1. Download and install the FusionWMS customization packages for Acumatica.
2. Configure Acumatica to optimize FusionWMS functionality.
3. Download and install the FusionWMS android app from Google Play and secure a Quick Connect pin.
4. For training manuals, instructional videos, etc go to http://www.fusionrms.com/fusion-wms/
5. Enjoy the benefits of FusionWMS for Acumatica.
